

Plastic Pipes in Infrastructure 2019

Moving the plastic pipe industry forward

Plastic pipes in infrastructure are organized by the leading plastics consultancy organization AMI. The seventh edition will see global industry experts come together in Dusseldorf on 9-10 April 2019 for this event.

The conference once again provides a unique networking opportunity and high-level forum for the latest developments and issues in the ever-evolving plastic pipes industry. Featuring a diverse programme of presentations by industry leaders, the focus for Plastic Pipes in Infrastructure 2019 is on new plastic pipe applications, material advances, and developments in production technology, and updates to certification and standards. This event is relevant to those operating in the global pipes industry: from material suppliers to pipe lay construction engineers.

Distinguished speakers will be presenting their presentations on important issues like **Addressing pipeline ageing and integrity challenges to increase performance, Innovation in material, process and applications, Testing, certification and standardization, Developments in pipe systems for enhancing durability, PP-RCT performance in water pressure pipes, Energy and time saving method for qualifying PE Pipe grades for long-term applications at 40°C & How raised temperature resistance polyethylene (PE-RT) demonstrates reliable performance in hot & cold applications**

Conference Sponsor BAUSANO S.p.A then shared their views on C-PVC processing. Conference Sponsor Sikora shared their expertise on keeping an eye on diameter, ovality, wall thickness and eccentricity for quality control during the extrusion of pipes.
