

# FFS - The Industrial Bagging System of the Future

Date:

Windmoller & Holscher is the leading global supplier of FFS machines with more than 850 references. Hardly any other segment of Industrial sacks is growing as dynamically as FFS.

FFS is not simply a bagging process but rather an integrated packaging concept which caught the attention of W&H to the developments of POLYQUICK, ROTALUX, and POLYLUX sealing machines. Demand for the more versatile and less expensive alternative led to the developments of DIAMANT, TOPAS, and TOPAS SL, the most user-friendly and reliable FFS machines.

With the newly designed PLATINUM layer palletizer and the downstream ARGON hood stretch line, W&H has now filled in the gaps and expanded its product portfolio from high performance DIAMANT and TOPAS FFS bagging systems to fully integrated and highly efficient bagging lines, which prepare goods for quick delivery, securely, and according to logistical best practice and joined the ranks of full-line suppliers of FFS bagging technology. In future, customers investing in high-performance bagging lines need only deal with one partner, which guarantees undivided project responsibilities.
