

DECO FILM – Discovers the new product line

Since 1971, year of its foundation, DECOFILM SpA has been successfully operating in the flexible packaging market, domestic and foreign, producing all kinds of plastic film, shrink or otherwise, with distinct characteristics of presentation and preservation of content.

A strong innovative connotation has enabled the Company to develop and offer, using cutting-edge technology and organization, new products to meet the needs of an evolving market.

The activity begins with the production of PVC-based presentation shrink films whose main brand, DECOTERM, soon became synonymous with quality and reliability.

The opening in 1981 of the Uboldo production unit represents a fundamental stage in the development of the company that, at the beginning of the nineties, proposes new heat-shrinkable polyolefin films as the DECOLINE, barrier films with the DECOEX series and last but not least the DECOWRAP stretch films.

Keeping an eye on the market changes, in 1995 DECOFILM creates a joint venture in Poland to perform better in Eastern Europe; DEKOFILM POLSKA grows rapidly and, in turn, constitutes a new production unit in Romania: DEKOFILM ROMANIA.

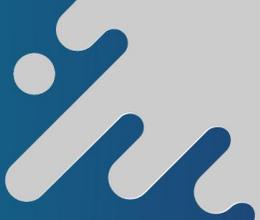

Substantial investments in the 2002-2007 period allow DECOFILM to considerably increase its production capacity, especially in the field of heat-shrinkable polyolefin-based display films and high barrier film for laminating and thermoforming.

In 2013 DECOFILM constitutes VELA SRL, doubling the productive capacity of the heat-shrink films, and simultaneously opens the laboratory for the production of heat-shrink barrier films and bags named DECOMAB.

Nowadays, the european group has four production sites: the two main ones in Italy, one in Poland and one in Romania. Each firm shares the group's values and dedication to produce the best possible films on the market, with an eye for the environment too.

In 2016, Decofilm made big investments in R&D, and now presents a whole new product range. The main purpose is expanding in new markets previously dominated by chinese products, and to do that the best way was offering something the other producers can't.

So, instead of focusing on the inflated market of all-purposes POF shrink film, Decofilm now has expanded its product range to cover the requirements of niche sectors such as high-speed machines, high-abuse applications, roll-packer machines, crosslink, soft-shrink, bakery, antifog, and even POF-based barrier films.

But Decofilm did not just invest on its core-business, the thermoforming products have been improved, and new food-oriented products have been developed, such as lidding barrier films, flow-pack barrier shrink-film, and even a low-barrier film made to seal polystyrene trays better and cheaper than stretch-wrap.

PVC shrink, stretch-wrap and all-purposes POF shrink films have also been substantially improved and remain the 'stronghold' of the italian group.

With its new, wide range of products, the Decofilm Group is now looking for international partners all around the world to expand its business in new, interesting markets.

Since 2001 the company has adopted the ISO 9001 quality system and its subsequent amendments and ensures compliance with EU law 10/2011 for products intended for food contact.

Our products:

Multi-purpose shrink films:

DCL-B: all purpose POF display shrink film

DCL-T: same as DCL-B but with improved mechanical characteristics

DCL-P: Top quality, high-shrink, suitable for high speed machines

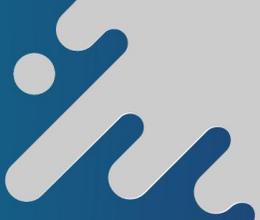

DCL-X: Crosslinked shrink film, extra strength

DCT-T: PVC based display shrink film

DCW-M/A: PVC based cling film

Special shrink films:

DCL-XS: Low shrink force, suitable for flexible products

DCL-H: high gauge for high abuse film

DCL-R: naturally curling film for specific gift-paper applications

DCL-K: Hot perforation film for bakery

DCL-XF: Antifog crosslink film, for vegetables or moist products

Heat-shrink Barrier films:

DCM-L: Polystyrene trays low barrier lidding film (meat, fish and cheese in supermarkets)

DCM-H: High barrier lidding film (PE/PP trays containing meat, deli and cheese)

DCM-B: Flowrap high barrier film for fruit, cheese and meat

DCM-A: High barrier shrink bags for meat fish and cheese

Thermoforming/laminating barrier films:

DCX-PEP: EVOH high barrier film for laminating

DCX-AP: top and bottom thermoforming films for food products

DCX-APE: top and bottom thermoforming/laminating high barrier films for food
